

## **NEWS RELEASE**

### **FOR IMMEDIATE DISTRIBUTION**

# **FullArmor Granted Patent for Pass through Authentication by the United States Patent and Trademark Office (USPTO)**

Patented Technology Enables External Login to an Internal Directory Service

**BOSTON, September 20, 2016** -- FullArmor, a leading provider of Cloud security and management tools, today announced that it has been granted patent number 9,450,944 for "System and Method for Pass-Through Authentication."

FullArmor's HAPI (Hybrid API) product utilizes this pass-through authentication as a key component of its secure identity and access gateway to enable developers, enterprise DevOps, and System Integrators to transparently integrate direct authentication and access capabilities of on-premise Active Directory (AD) infrastructures into their Cloud and mobile apps. Using HAPI, apps can seamlessly support Active Directory login, provision/deprovision users and groups, and connect to internal, on-premise resources including file shares, SharePoint, SQL and more.

"This patent is an acknowledgment of our team's innovation in bridging the on-premise and cloud worlds," said Danny Kim, CTO of FullArmor Corp. "We are pleased that the US Patent and Trademark Office awarded our efforts."

### **Seamless, Secure Connection to the Enterprise**

The FullArmor HAPI Platform provides an extensive set of APIs that enables developers, enterprise DevOps, and System Integrators a secure platform to:

- Enhance Cloud and mobile apps with the capability for users to login to on-premise Active Directory instances
- Make it possible for Cloud and mobile apps to directly query and provision/deprovision AD user/group information without the security concerns and latency associated with duplication and syncing
- Eliminate the need to rely on VPNs or third party Identity providers to connect to on-premise AD infrastructures. The HAPI Gateway serves as a secure, dynamic and scalable identity/authentication/access provider
- Support hybrid access to both Active Directory and Cloud directory resources

**About FullArmor**

FullArmor is a leading edge provider of security and management tools for software-as-a-service (SaaS) and Cloud technologies. Its latest offerings enable SaaS and mobile vendors to access internal Active Directory resources from the Cloud. The company is a Microsoft Gold Certified Partner. More than 5 million users and 1,500 organizations worldwide rely on technology developed by FullArmor.
